

## LOST PROFILE - SPECIFICATION SHEET - AEGIS VASE

### DIMENSIONS

470mm H, 200mm Diameter (approx.)

18.5" H, 8" Diameter (approx.)

Due to the nature of mouth-blown glass, each vase is unique and dimensions will vary.

### MATERIALS

Brass and White Glass

### FINISH

The brass cage is baked to 500 °C (950°F) which leaves the brass in an "Aged" but also unpredictable finish. We apply a wax coating to protect the brass as it comes out of the kiln. The finish can vary as a result of the process.

### MAINTENANCE

Aegis Vase can be washed, inside and out, in a sink with warm water and a soft cloth.

### PRICING & LEAD TIMES

Please contact us or your nearest LOST PROFILE representative for current pricing and lead times.

Aegis Vase reinterprets the traditional Italian "Cage-Blown" technique into a contemporary form.

A large gathering of white glass is blown into a brass cage, the glass locking the cage together permanently.

Aegis means "a form of protection", thus conceptually poses the question; Is the cage protecting us from the glass, or protecting the glass from us?
